Cellcore or its sub-components could be included in the Core or Core Plus runtime provided that the Embedded System:

- (a) must be limited to data use only, and
- (b) may not be used to make voice calls over a cellular network. This limitation includes any indirect use of the voice capabilities of cellular networks via peripheral devices to make the voice call and/or the voice call connection.

#### Help\*

Help is not included in the Core run-time because it requires a browser. The Windows Embedded CE help engine is HTML-based, and help documentation comes in the form of HTM files. However, this help documentation is available for use, but it does require that customers create their own viewing software.
